As part of the modernisation of the Princess Grace Hospital Centre, the maternity ward is undergoing a complete renovation. This initiative aims to improve safety, comfort and the quality of care for patients and medical staff.

Project details

Project type: Renovation of the maternity ward

Segment: Healthcare

Location: Monaco, Princess Grace Hospital Center

End customer : CHPG – Maternity Ward

Product used: Compact High Pressure Laminate - Signature

Applications: Wall cladding

Fitter: One two trees

Completion date: January 2025

Within the prestigious Princess Grace Hospital Centre in Monaco, the maternity ward has recently undergone partial renovation with a clear objective: to provide a modern, reassuring and welcoming environment for both patients and healthcare staff.

For this transformation, the establishment called on Polyrey's Signature solution to bring a tailor-made aesthetic touch to its spaces. Thanks to high-definition digital printing, the wall coverings are customised according to a soft and soothing graphic charter, while complying with the technical and sanitary requirements of a hospital environment.

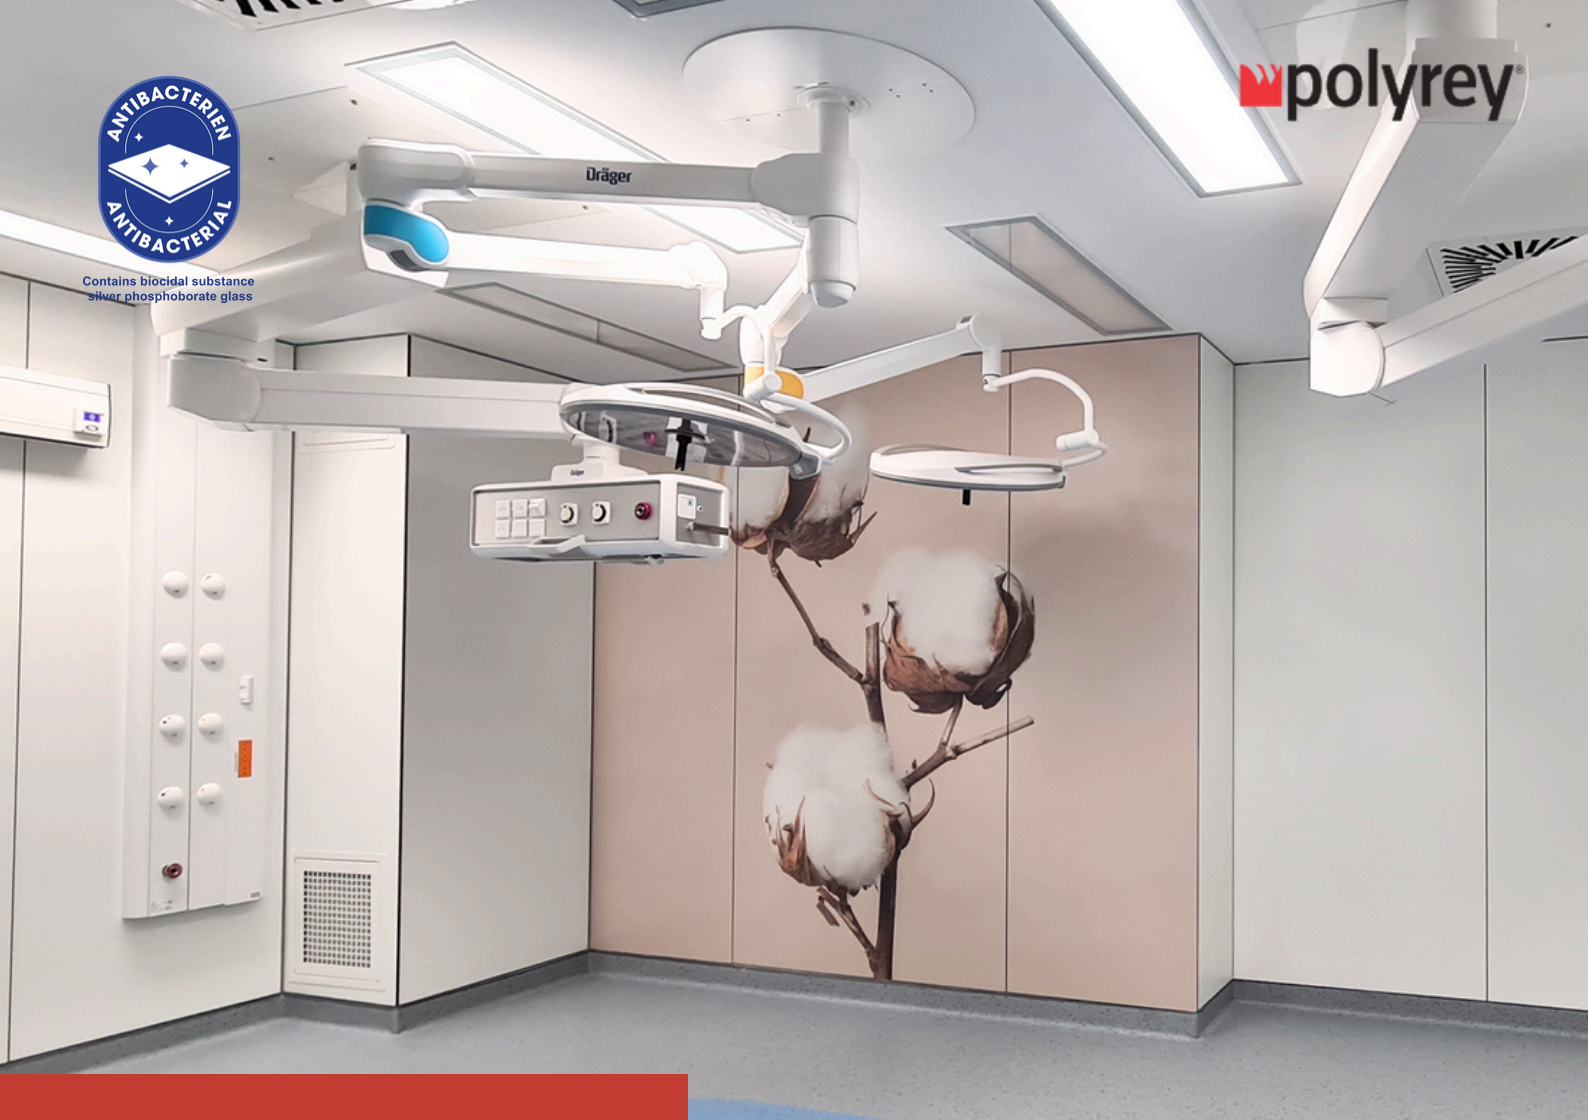

This solution offers great creative freedom while guaranteeing the durability, resistance required for healthcare facilities and is, far more than stickers solution. This project demonstrates Signature's ability to combine well-being, functionality and performance in demanding projects.

Product benefits

1

Complete customisation
for a unique result.

2

**High resistance to impact,
scratches, stains and
repeated disinfection**

3

Easy maintenance: non-
porous, antibacterial surface
that is simple to clean and
durable.

4

Versatile use: wall cladding,
reception desk doors,
signage for all sectors.

Guaranteed hygiene for healthcare facilities

Thanks to their integrated antibacterial surface, Polyrey panels limit the spread of bacteria and guarantee optimal hygiene. Effective, reliable and laboratory-tested, it acts sustainably and does not contain nanoparticles. It is included as standard at no extra cost. It is effective against seven bacteria, including *Staphylococcus aureus*, *Salmonella* and *Escherichia coli*, which are feared in healthcare facilities. Non-porous and easy to clean, they are resistant to disinfectants commonly used in hospitals. Ideal for sensitive areas, it is the perfect solution.
